

WOOD

SOLID WOOD

The wood we use is solid and naturally treated only with linseed oil. *Wood should generally be nourished once a year with linseed oil or teak oil (for Iroko wood).*

Our wood products and components comply with FSC standards; TSCA Title VI - 40 CFR 770 - Formaldehyde emission standards for composite wood products; CARB Final Regulation.

Tonucci Collection pays particular attention to the selection of the materials to be used.

The materials are all natural, there is the possibility of slight differences in tone or finishes between different lots which are technically unavoidable.

SOLID WOODS

Oak

A premium oak wood widely found in Europe, renowned for its high resistance, hardness, and timeless aesthetic.

It features a colour ranging from golden yellow to brown, with pronounced and elegant grain. It tends to darken slightly with exposure to light and ageing.

Black Walnut

Walnut wood is one of the most prized, durable, and sought-after materials in the world, making it rare and more expensive than other wood types.

It features a fine, dense grain with warm tones ranging from light brown to dark brown. Highly appreciated in and luxury furniture.

Iroko

A premium exotic wood, known for its high hardness, dimensional stability, and resistance to weather and parasites. With a yellow-brown colour that oxidises into a darker brown, it is a versatile material, also ideal for outdoor use thanks to its exceptional durability.

Iroko offers very high performance and is a valid alternative to teak wood.
